- Do not use this product for the purpose of generating an alarm for injury to operators, breakdown of devices, or production halt. Design the system so that is can be hand-operated in case the product malfunctions.
- Do not use this product as a control unit on applications requiring extreme stability such as airplane control device, aerospace device, centralized data processing device, nuclear control system, medical life support system, etc.
- In case the product is used in transportation such as trains, vehicle, vessels, or warning devices for disasters and crimes, various safety devices and medical devices excluding life support system, you are required to design backup or failure provision system to secure reliability and stability.
- Even if the screen is black, the unit could still be turned on with a dead LCD backlight. When the operator touches a panel in this situation, the action could cause device's malfunction. Do not use product's graphic object for controlling safety devices such as emergency stop switches.

# Essential Safety Precautions

## Prohibition of disassembly and modification

- Do not disassemble or modify the PC. It will void the warranty and may cause an electric shock or fire.

## Avoiding of flammable substances

- This version of the PC is not rated for flammable environments. Do not use this panel around flammable gases. It may cause an explosion.

## Precautions for installation

- Be sure to securely connect all cable connectors to the PC. A loose connection may cause incorrect input or output.
- Make sure to tighten the screw with standard torque (0.5–0.6 Nm). Loose connections may cause short, fire or malfunction.
- Be careful that metal debris does not enter the PC, they may cause a fire, panel damage malfunction.

## Precautions for wiring

- Make sure to check if the device's power supply is turned off before wiring. Failure to do so may cause electric shock or damage to the device.
- Do not use power beyond the specified voltage range of the PC. Doing so may cause fire, electric shock or damage to the device.

# Essential Safety Precautions

## WARNING

- When grounding PC, make sure to separate it from other devices.
- If ground wires are close to each other, it may cause electric shock or damage to the device.
- Use wire which has grounding resistance lower than 100  $\Omega$  and thicker than 1 mm<sup>2</sup>. Follow your country's applicable standard.
- Correctly wire the panel, be sure that the rated voltage and terminal layout are within the designated range. If the voltage supplied differs from the rated voltage, or incorrect wiring or grounding is performed, it may cause a fire or unit malfunction and it will void the warranty.

## How to manage LCD breakage

- LCD panel contains strong irritants. If you touch liquid of LCD due to its breakage for any reason, flush your skin out for 15 minutes with the running water.
- If you get liquid of LCD in your eyes, flush your eyes out for 15 minutes with the running water and contact a physician.

## Maintenance – Battery Exchange

- The PC uses a lithium battery to back up the internal clock. Do not replace this battery yourself because it may cause an explosion. If the battery needs to be replaced, please contact your local service center.

# General Safety Precautions

- Do not strike the touch panel with a hard or pointed object, or press on the touch panel with too much pressure, since it may damage the touch panel or the display.
- Do not install the PC where the ambient temperature exceeds the allowed range (0–50°C). Doing so may cause the PC to malfunction or shorten product lifespan.
- Do not restrict or limit naturally occurring rear-face ventilation of the PC, or storing or using the PC in an environment that is too hot.
- Do not use the PC in areas where large, sudden temperature changes can occur. These changes can cause condensation to form inside the unit, possibly causing the unit to malfunction.
- Do not allow water, liquids, metal or charged particles to enter the PC, since they can cause either a PC malfunction or an electric shock.
- Do not store or use the PC in direct sunlight, or in excessively dusty or dirty environments. Do not store or use the PC where strong jolting or excessive vibration can occur.
- Do not store or use the PC where chemicals (such as organic solvents, etc.) and acids can evaporate, or where chemicals and acids are present in the air.
- Do not use paint thinner or organic solvents to clean the PC.
- Do not store LCD panel where the ambient temperature is lower than the its range (-20°C–60°C). Doing so may cause congelation of liquid contained in LCD which result in damage to the product.
- Do not store LCD panel where the ambient temperature is higher than the its range (-20°C–60°C). Doing so may cause the liquid contained in LCD to become isotropic and unreduced.
- After turning the PC OFF, be sure to wait 20 seconds before turning it ON again. If the PC started too soon, it may not start up properly.
- Backup your PC project regularly to prepare for the unexpected accident.

# UWF: Unified Write Filter

Supported OS

Windows 10 Enterprise, Windows 10 IoT Enterprise

C: drive of TOUCH/PPC is protected by UWF. UWF is a function of Windows Embedded which protects the physical storage media from all write attempts.

- UWF intercepts all write attempts to a protected volume and redirects those write attempts to a RAM.
- When TOUCH/PPC reboots, all data stored in the RAM are cleared. C: drive is restored to the previous status.
- To enable/disable UWF, click [Start] and execute  XWFWin which is fixed on the Start menu. Right-click on the program and run as administrator.

- When you click [Enable], the system reboots and UWF is enabled.
- When you click [Disable], the system reboots and UWF is disabled.

- To restore in Windows 10, run “UWF\_SETUP\_WIN8\_WIN10” as administrator and reset UWF, which is located in C:\XWF (or C:\CIMON\XWFWin).
- If icon is deleted, run “XWFWin” in C:\XWF (or C:\CIMON\XWFWin).
- Professional OS(DSP) which is not ‘Embedded’, does not support UWF.

### WARNING

- To avoid an electric shock, when connecting the PC power cord terminals to the power terminal block, confirm that the PC power supply is completely turned OFF, via a breaker, or similar unit.
- Since there is no power switch on the PC unit, be sure to attach a breaker-type switch to its power cord.
- Please check if the product is AC or DC type.
- Check the rated voltage of the product.
- If it is terminal block type, loosen the screw and put ring terminal, then tighten the screw.
- If it is terminal block connector type, be cautious that the power wire not to fall out of terminal block.
- If the power supply voltage exceeds the GP's specified range, connect a voltage transformer.
- Between the line and the ground, be sure to use a low noise power supply. If there is still an excessive amount of noise, connect a noise reducing transformer.
- The power supply cord should not be bundled with or kept close to main circuit lines (high voltage, high current), or input/output signal lines.
- Connect a surge absorber to handle power surges.
- To reduce noise, make the power cord as short as possible.

- To avoid shortage by loosen ring terminal, put insulating sleeve and check if the wires of ring terminal connected properly.
- Torque size of 0.5–0.6 N.m are suitable to tighten screw.
- When connect FG terminal, ground wire before.

# 5. Grounding Caution

- Inside the PC unit, the SG (Signal Ground) and FG terminals are connected to each other.
- When connecting an external device to the PC with the SG terminal, ensure that no short-circuit loop is created when you setup the system.
- FG terminal is on the communication port side. Unfasten screw signed  and connect ring terminal.

- When grounding FG terminal, separate with other devices. Refer to the picture below.

① Exclusive grounding : Good

② Common grounding : Adequate
